

MEA SERIES

AXIAL GENERAL PURPOSE CAPACITOR

METALLIZED POLYESTER CAPACITOR ▲ Axial flat type

High reliability

Flame retardant plastic case, epoxy resin sealed, UL 94V-0

Self-healing property

High insulation resistance

High stability of capacitance and dissipation factor

SPECIFICATION

$$I_{RMS} = \frac{I_{p-p}}{2 \cdot \sqrt{2}}$$

TECHNICAL SPECIFICATION

No.	Category	Specification						
1	Scope	This specification applies to capacitors for general electronics applications. Reference standards: IEC 60384-2						
2	Product Name	Metallized polyester film capacitor, Type MEA						
3	Construction	Dimensions:		Refer to dimensions drawing				
								
		1 = Element		Metallized Polyester film				
		2 = Metal spray		Special solder. (Lead Free) compliant to RoHS directive				
		3 = Lead wire		Tinned wire (Cu wire) or tinned copper clad-steel wire (CP wire). (Lead Free) compliant to RoHS directive				
		4 = Inner coating		Epoxy resin filled. (UL-94V-0 Standard)				
5 = Outer coating		Polyester tape wrapping. (UL-510)						
4	Atmospheric and Temperature Characteristics	Standard atmospheric conditions. Unless otherwise specified, the standard range of atmospheric conditions for making measurements and tests is as follows:						
		Ambient temperature:		15 to 35°C				
		Relative humidity		45% to 85%				
		Air pressure		86 to 106 kPa				
		If there may be any doubt on the results, measurements shall be made within the following limits.						
		Ambient temperature:		20°C ± 5°C				
		Relative humidity:		60 to 70%				
		Operating temperature range						
		Lowest operating temperature:		-40°C				
		Maximum operating temperature:		+110°C (case-temperature) with specified voltage-derating				
The capacitor can be operated up to 110°C case-temperature (according to the power to be dissipated). Derating ratio of rated voltage +85°C to +110°C: 1.25% per °C for V _{RDC} The temperature is measured at the hottest point of the case when the capacitor has reached its thermal equilibrium.								
Rated temperature range		-40°C to +85°C						
Rated temperature range is the range of ambient temperature for which the capacitor can be operated continuously at rated voltage.								
5	Electrical Characteristics	Rated voltage:		V _R at 85°C	100V _{DC}	250V _{DC}	400V _{DC}	630V _{DC}
		Category voltage:		Up to 85°C V _C = V _R				
		Rated upper limit temperature:		+85°C				
		Usable upper limit temperature:		+110°C				
		Capacitance range:		0.1μF to 10μF				
		Capacitance tolerance:		±2% (G), ±5% (J), ±10% (K)				Measured at 1kHz, 1V

TECHNICAL SPECIFICATION

No.	Category	Specification		
6	Mechanical Characteristics	Test Item	Conditions	Performance
		Robustness of terminations (IEC68-2-21)	<p>Tensile Ua1</p> <p>A load of 10 N (1.0kg) shall be gradually applied to the terminal in the axial direction and held thus for 10 sec</p> <p>Bending Ub methode 1</p> <p>While a load of 500g applied to the lead wire, the body of the capacitor shall be bent 90° and returned to the original position. This operation shall be conducted in a few seconds.</p> <p>Then the body shall be bent 90° at the same speed in the opposite direction and returned to the original position</p>	There shall be no such mechanical damage as terminal damage etc.
7	Endurance Characteristics	Solderability (IEC68-2-20 Ta)	<p>Solder bath: 245°C ± 5°C</p> <p>Immersion time: 2.5±0.5sec</p> <p>Visual examination</p>	At least 95% of the circumferential face of lead wire up to immersed level shall be covered with new solder
		Resistance to soldering heat (IEC 68-2-20 Tb)	<p>Solder bath: 260 °C ± 5 °C</p> <p>Immersion time: 10±1sec</p> <p>Thickness of heat shunt (Printed wiring board): 1.6mm</p> <p>Capacitance at 1kHz</p> <p>tan δ at 1kHz</p>	<p>Capacitance change</p> <p>$\Delta C/C \leq \pm 2\%$</p> <p>tan δ change</p> <p>$\leq 0.5\%$ at 1kHz</p>
		Vibration proof (IEC68-2-6 Fc)	The frequency shall be varied from 10Hz to 55Hz at 1.5mm amplitude and back to 10Hz in approximately 1-minute intervals. This motion shall be applied for a period of 2 hours in each of 3 mutually perpendicular directions. During the last 30 min of vibration in each direction, checks shall be made for open or short-circuit and interruption	<p>Bending strength:</p> <p>There shall be no open or short-circuiting and the connections must be stabilized.</p>
		Damp heat steady state (IEC68-2-3 Ca)	The capacitor shall be stored at a temperature of 40 ± 2°C and relative humidity of 90% to 95% for 1000 hours. And then the capacitor shall be subjected to standard atmospheric conditions for 1 to 2 hours, after which measurement shall be made	<p>Capacitance change</p> <p>$\Delta C/C \leq \pm 5\%$</p> <p>tan δ change</p> <p>$\leq 0.5\%$ at 1kHz</p> <p>R insulation $\geq 50\%$ of limit value</p>
		Electrical endurance (IEC 60384-2)	<p>125% of category voltage shall be applied to the capacitor at a temperature of 110 ± 2°C for 1000 hours. Then the capacitor shall be subjected to standard atmospheric conditions for 1 to 2 hours, after which measurement shall be made.</p> <p>The load resistor in series with the capacitor shall be 20Ω to 1kΩ.</p>	<p>Capacitance change</p> <p>$\Delta C/C \leq \pm 10\%$</p> <p>tan δ change</p> <p>$\leq 0.5\%$ at 1kHz</p> <p>R insulation $\geq 50\%$ of limit value</p>

TECHNICAL SPECIFICATION

No.	Category	Specification
8	Storage conditions	It should be noted that the solderability of the terminals may be deteriorated when stored barely in an atmosphere for a long period.
		It should not be located in particularly high temperature and high humidity, it must submit to the following conditions (Keeping in the original package) Temperature: 5°C to 35°C Relative humidity: ≤ 70% Storage period: ≤ 12 months (Following the manufacturing date marked on the label in package bag)
		Avoid wetting the capacitor by water, oil, salt and/or poisonous gas.
		If used the capacitor that overdue the storage time, it should be test, the characteristics of the capacitor or contact with our technical engineer.

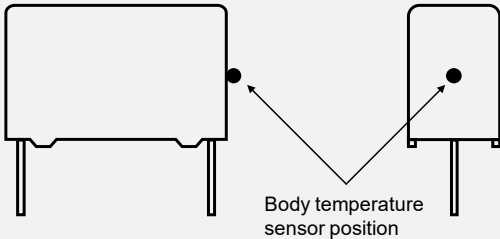

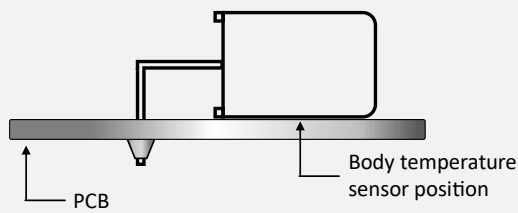

RECOMMENDED WAVE SOLDERING PROFILE ▲ THT PACKAGE

Capacitor body temperature should follow the description below:

Profile Features		Polypropylene Film Capacitor	Polyester Film Capacitor
Capacitor body maximum temperature at preheating	T_p	$\leq 110^\circ\text{C} / 120 \text{ seconds}$	$\leq 125^\circ\text{C} / 120 \text{ seconds}$
Capacitor body maximum temperature at wave soldering	T_s	$\leq 120^\circ\text{C} / t_s \leq 45 \text{ seconds}$	$\leq 150^\circ\text{C} / t_s \leq 45 \text{ seconds}$

DETERMINING THE CAPACITOR BODY TEMPERATURE

Vertical Mounting	Horizontal Mounting
 <p>Body temperature sensor position</p>	 <p>PCB Body temperature sensor position</p>
<p>The body temperature sensor position is defined as the highest temperature point around the capacitor body.</p>	<p>If there is 90 degree bending product, the sensor position shall between product and PCB</p>

SOLDERING SUGGESTIONS

When solder a capacitor, heat in soldering is conducted to the element of the capacitor from wire lead and an enclosure, and hence it should be noted that soldering under high temperature and a long period may cause deterioration of breakdown of capacitors. Be sure to solder within the recommended temperature condition range.

HAND SOLDERING

- a.) Soldering iron top temperature: $\leq 350^{\circ}\text{C}$
- b.) Soldering time: $\leq 3\text{sec}$

If re-work or dipping twice in necessary, it should be done after the capacitor returned to the normal temperature. Suggestion time is 24 hours.

THT film capacitors are not suitable for reflow soldering.

When SMD components are used together with film capacitor, the film capacitor should not pass into the SMD adhesive curing oven. The film capacitor should be assembled after the SMD process.

In order to ensure proper conditions for manual or selective soldering, the body (surface) temperature of the film capacitor (T_s) must be $\leq 120^{\circ}\text{C}$.
